## Yanmar at Barrus

► I.E.P. Barrus can now supply several advanced Yanmar engines, including the electronically controlled 4TNV98 direct injection model that meets Tier 4, stage 3a emission regulations. This is one of the TNV family of water-cooled engines featuring electronic EGR, electronic governing and fuel equipment. In response to current noise regulations imposed on certain equipment in Europe, Yanmar have introduced the LN Series air-cooled engine. This will help OEM's reduce overall noise levels, while the extremely simple servicing features are in keeping with the existing L Series engines. Many of the changes incorporated in the LN Series are internal.
